DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

BONAFIDE CERTIFICATE

This is to certify that this Summer Internship project report "**UI/UX Design Of ServePlus – Food Delivery Mobile Application**" is the Bonafide work **of SHOBANA V (810023104017)** and has satisfactorily completed the course **of CS3711 – SUMMER INTERNSHIP** for **SEVENTH semester, B.E. COMPUTER SCIENCE AND ENGINEERING** during the academic year **2026–2027**.

Faculty Incharge **Head of the Department**

Submitted for the practical examination held on _____.

ABSTRACT

The ServePlus – Food Delivery Mobile Application is a UI/UX design project developed during my internship at Media Wave Technologies, Tiruchirappalli. The project focuses on designing a bold, friendly and easy-to-use mobile food ordering experience under the tagline “Crave. Click. Chill.” It helps users sign up or continue as a guest, discover restaurants and dishes, build a cart, check out with a preferred payment method, and follow their order live until it is delivered.

The project follows a user-centered Design Thinking approach consisting of Empathize, Define, Ideate, Wireframing, Visual Design, Prototyping, and Testing. User research and competitor analysis were used to understand common issues in existing food delivery applications. Based on the findings, a user persona, user flow, low-fidelity wireframes, a design system, high-fidelity screens, and an interactive prototype were created.

Figma was the primary design and prototyping tool. The final design uses a consistent visual language with a deep maroon and red primary palette, an orange accent taken from the logo plate, a soft cream background, a bold condensed typeface for headings with a clean sans-serif for body text, rounded buttons and cards, and a four-tab bottom navigation bar (Home, Orders, Cart, Profile). The application includes the Splash, Login, Sign Up, Home, Restaurant Menu, Cart, Checkout, Order Confirmation, Live Order Tracking, and Order Delivered screens.

Usability, responsive, functional, and visual checks were carried out on the prototype. The results indicated that the proposed interface improved navigation clarity, reduced user effort, simplified the checkout experience, and maintained visual consistency across screens. The internship provided practical exposure to professional UI/UX workflows and strengthened my skills in research, wireframing, design systems, prototyping, testing, documentation, and presentation.

1.INTRODUCTION

An internship is an essential part of professional education because it connects academic learning with real-world industrial practice. During the internship at Media Wave Technologies, Tiruchirappalli, I worked in the UI/UX Design domain and designed a modern mobile food delivery application named ServePlus. The project focused on creating a simple and attractive interface for users who want to discover restaurants, order their favourite dishes, make payments, and track deliveries. The design process was carried out primarily in Figma and followed a user-centered Design Thinking methodology.

The project included user research, competitor analysis, requirement analysis, user persona, user flow, low-fidelity wireframes, a design system, high-fidelity UI design, interactive prototyping, and usability testing.

1.1 OBJECTIVES OF THE INTERNSHIP

- To understand professional UI/UX workflows followed in the software industry.
- To perform user research, requirement analysis, and competitor analysis.
- To create user personas and user flows.
- To design wireframes and high-fidelity mobile interfaces using Figma.
- To create a reusable design system with consistent typography, color, spacing, icons, and components.
- To develop an interactive prototype for usability evaluation.
- To improve problem-solving, creativity, communication, teamwork, and documentation skills.

1.2 SCOPE OF THE PROJECT

The scope of the ServePlus – Food Delivery Mobile Application includes designing a complete food ordering experience that supports the major stages of the customer journey. The application enables users to register or log in (including social sign-in and guest access), search for restaurants and dishes, browse categories, view a restaurant menu, add items to a cart with quantity control, enter a delivery address, select a payment method, receive an order confirmation, track the delivery live, and rate the experience or reorder.

The project focuses primarily on UI/UX design rather than backend software development. It covers the design process from research and requirements to wireframes, visual design, prototyping, and testing. The final interface is intended to provide a clear and consistent experience across common mobile screen sizes.

1.3 PROJECT OBJECTIVES

- Reduce the effort required to find restaurants and dishes.
- Provide a clear and predictable navigation structure.
- Simplify cart and checkout interactions with a visible step indicator.
- Present payment choices in an understandable manner.
- Provide clear order-status and delivery partner information.
- Maintain visual consistency through reusable components.
- Create a developer-friendly prototype that can be implemented as a mobile application.

1.4 BENEFITS OF THE INTERNSHIP

- Practical exposure to industry-oriented UI/UX workflows.
- Hands-on experience with Figma, prototyping, and reusable components.
- Better understanding of user-centered design and Design Thinking.
- Experience in documenting a complete case study and project report.
- Improved communication, presentation, teamwork, and problem-solving skills.

1.5 DESIGN APPROACH

The ServePlus project follows a user-centered approach in which design decisions are connected to user needs and observed pain points. The process begins with understanding users and existing food delivery experiences, continues through definition and ideation, and then moves into wireframing, visual design, prototyping, and testing.

Stage	Purpose
Empathize	Understand user behavior, expectations, and pain points.
Define	Convert research findings into clear design problems.
Ideate	Explore alternative layouts, navigation patterns, and interactions.
Wireframe	Establish structure and information hierarchy before visual styling.
Visual Design	Apply colors, typography, icons, components, and spacing.
Prototype	Connect screens and simulate the user journey.
Test	Evaluate usability, navigation, readability, and consistency.

1.6 INTERNSHIP OUTCOME

The internship strengthened my practical understanding of UI/UX design and gave me experience in converting user requirements into a structured digital interface. The ServePlus project improved my confidence in using Figma and in presenting design decisions through research, wireframes, design systems, prototypes, and testing results.

1.7 TECHNOLOGIES AND TOOLS

Technology / Tool	Purpose
Figma	UI design, wireframing, components, design system, and interactive prototype.
Google Fonts	Typography selection and consistency.
Icon libraries	Consistent iconography for navigation, search, call, chat, and payment icons.
Image assets	Food photography, restaurant logos, and the ServePlus brand mark.

Figma was the primary design environment. It supported reusable components, Auto Layout, prototyping with connected flows, collaboration, and developer handoff.

2.COMPANY PROFILE

2.1 ABOUT THE COMPANY

Media Wave Technologies is a software company located in Tiruchirappalli, Tamil Nadu. The company specializes in Web Development, Mobile Application Development, UI/UX Design, Digital Marketing, and Software Solutions. It provides innovative and user-friendly digital solutions for businesses and educational institutions. The company follows industry-standard software development practices and encourages interns to work on real-time projects.

2.2 VISION

To become a leading software development company by delivering innovative, reliable, and high-quality digital solutions that enhance customer satisfaction and business growth.

2.3 MISSION

- To develop high-quality software applications.
- To provide user-friendly UI/UX design solutions.
- To adopt modern technologies in software development.
- To encourage innovation and continuous learning.
- To deliver excellent customer service.

2.4 SERVICES OFFERED

Media Wave Technologies provides the following services:

- Web Application Development
- Mobile Application Development
- UI/UX Design
- Website Design and Development
- Digital Marketing
- Graphic Design
- Software Testing
- Software Maintenance and Support

2.5 ORGANIZATION STRUCTURE

The organization follows a structured hierarchy to ensure smooth project execution and effective teamwork.

- Managing Director
- Project Manager
- Team Lead
- UI/UX Designers
- Frontend Developers
- Backend Developers
- Quality Assurance (QA) Engineers
- Interns

The internship was carried out under the guidance of Sivanika S (Software Developer, Industrial Expert and Joint Supervisor) and other experienced professionals, which helped in

understanding industry practices, teamwork, project planning, and professional communication.

3.DAILY WORK REPORT

The internship lasted for 27 working days from 15 June 2026 to 15 July 2026, during which I learned requirement analysis, user research, wireframing, prototyping, design systems, usability testing, and professional project documentation. The day-wise activities performed during the internship are presented below.

Day 1: Company orientation and introduction to the internship project, ServePlus – Food Delivery Mobile Application.

Day 2: Studied project requirements and understood the objectives of the application.

Day 3: Conducted competitor analysis by studying popular food delivery applications.

Day 4: Performed user research to identify user needs and expectations.

Day 5: Created user personas based on the research findings.

Day 6: Prepared the user flow and information architecture of the application.

Day 7: Designed the brand identity: logo, tagline “Crave. Click. Chill.” and colour palette.

Day 8: Created low-fidelity wireframes for the Login, Sign Up, and Home screens.

Day 9: Created wireframes for the Restaurant, Cart, and Checkout screens.

Day 10: Reviewed wireframes with the mentor and implemented suggested improvements.

Day 11: Created the design system including colours, typography, icons, buttons, cards, and reusable UI components.

Day 12: Designed the Splash, Login, and Sign Up screens using Figma.

Day 13: Designed the Home screen with search, categories, and featured restaurants.

Day 14: Designed the Restaurant menu screen with category tabs and quantity controls.

Day 15: Designed the Cart screen with price details.

Day 16: Designed the Checkout screen with step indicator, address, and payment options.

Day 17: Designed the Order Confirmation screen.

Day 18: Designed the Live Order Tracking screen with map and status timeline.

Day 19: Designed the Order Delivered screen with rating and reorder options.

Day 20: Reviewed the complete UI design and made necessary improvements.

Day 21: Created the bottom navigation bar and ensured consistency across all screens.

Day 22: Developed the interactive prototype in Figma by connecting all screens.

Day 23: Conducted usability testing for all screens.

Day 24: Improved the UI based on testing feedback.

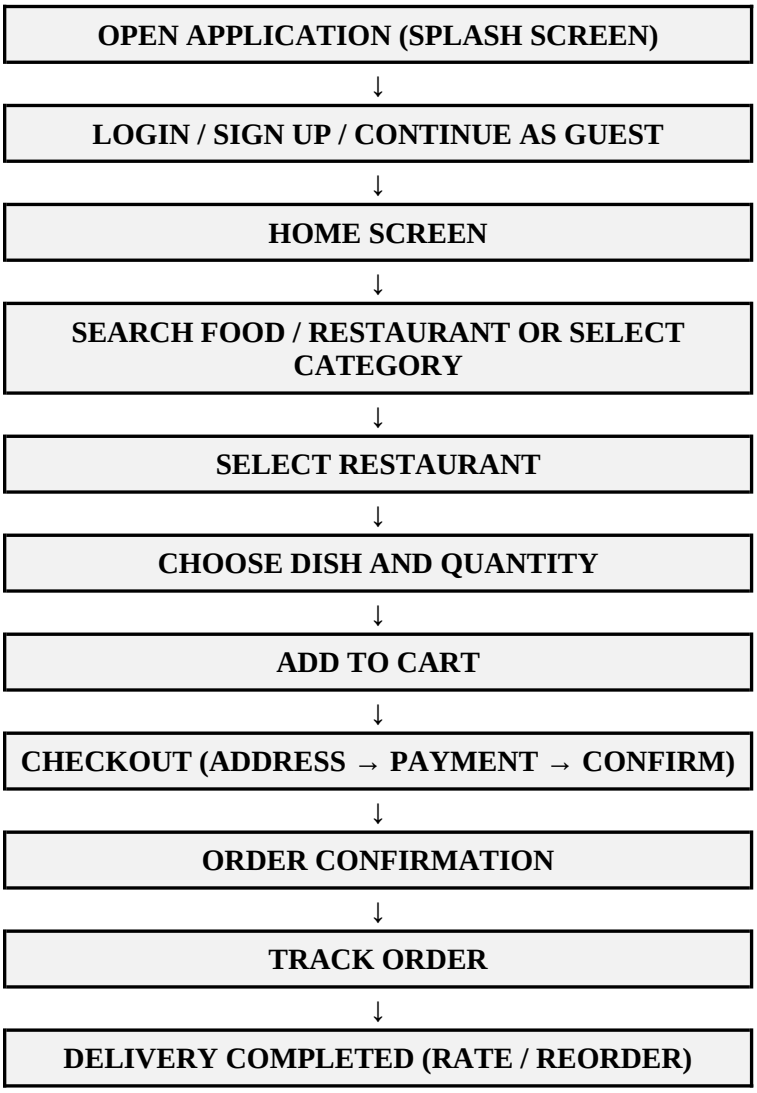

Day 25: Verified the layouts for different mobile screen sizes.

Day 26: Finalized all application screens and prepared project documentation and the internship report.

Day 27: Presented the prototype, submitted the final project, and received feedback from the internship mentor.

4.BLOCK DIAGRAM

The following block diagram represents the user flow of the ServePlus application, that is, the steps followed by users while interacting with the application. It helps in creating a smooth navigation experience.

Benefits of User Flow

- Improves navigation.
- Reduces user effort.
- Provides better user experience.
- Helps developers understand application structure.

5.SERVEPLUS – FOOD DELIVERY MOBILE APPLICATION

5.1 EXISTING SYSTEM

On many existing food delivery platforms, users must go through several screens to place a single order. Navigation is often inconsistent, search offers limited options, and the checkout process is lengthy. Understanding delivery details and tracking order status can also be confusing.

- Navigation between screens is complicated.
- The checkout process is long or confusing.
- Search and category options are inadequate.
- Visual hierarchy is inconsistent.
- Payment options are difficult to understand.
- Order tracking and status information are unclear.
- Users are forced to create an account before they can browse.

5.2 PROPOSED SYSTEM

ServePlus aims to provide a centralized food ordering experience by dividing the customer journey into clear and easily understandable stages. It offers instant access to search and categories, clear restaurant and menu details, easy cart management, a step-based checkout, and live order tracking with delivery partner contact options.

- Simple and consistent navigation through a four-tab bottom bar.
- Prominent search and category shortcuts on the Home screen.
- Guest access so users can start ordering without signing up.
- Quantity steppers and a sticky “Add to Cart” bar showing the running total.
- A four-step checkout indicator (Cart, Address, Payment, Confirm).
- Order status timeline and delivery partner details in one place.
- Reorder and rating options after delivery.

5.3 PROPOSED SYSTEM – DESIGN CHARACTERISTICS

Area	Design Approach
Branding	Plate-and-cutlery logo with food truck, maroon header with curved edge, orange accent.
Navigation	Bottom navigation: Home, Orders, Cart, Profile; breadcrumb on inner screens.
Discovery	Search bar, circular category shortcuts, featured restaurant cards.
Food Selection	Menu list with images, price, category tabs, and quantity stepper.
Checkout	Step indicator, delivery address form, payment method options, order summary.
Tracking	Live map, delivery partner call/chat, status timeline, order details.
Feedback	Star rating, reorder, and back-to-home actions.
Consistency	Reusable components and common design tokens.

5.4 CAPABILITIES

- User registration and login with Google, Apple, and email options.
- Guest access (“Continue as guest”).
- Category-wise discovery (Biriyani, Burgers, Meals, Snacks).
- Restaurant menu browsing with Starters, Main Course, and Desserts tabs.
- Cart management with price details.
- Address entry and saving.

- Payment selection through UPI, Credit/Debit Card, and Wallet.
- Order confirmation with estimated delivery time.
- Live order tracking with delivery partner call and chat.
- Order rating and quick reorder.

6.PROPOSED METHOD

6.1 USER RESEARCH

User research is the process of understanding user behavior, needs, expectations, and problems before designing an application. It helps designers create solutions that are useful and user-friendly.

For the ServePlus – Food Delivery Mobile Application, user research was conducted to understand how people use food delivery platforms and what difficulties they face while ordering food online.

Research Methods

- User interviews
- Competitor analysis
- Online surveys
- Observation of existing applications

Research Findings

- Users prefer simple and fast navigation.
- Users want easy search for restaurants and dishes.
- Users expect secure and familiar payment methods such as UPI.
- Users prefer real-time order tracking and the ability to contact the delivery partner.
- Users dislike being forced to sign up before browsing.

6.2 USER PERSONA

A user persona is a fictional representation of a target user created based on research data. It helps designers understand user goals, needs, and challenges.

Name: Karthik Raj
Age: 21 Years
Occupation: College Student

Goals

- Order food quickly.
- Find nearby restaurants.
- Track delivery status.
- Reorder favourite meals.

Needs

- Simple interface.
- Fast checkout process.
- Multiple payment options.
- Easy navigation.

Pain Points

- Complex application layouts.
- Slow ordering process.
- Difficult restaurant search.
- Mandatory registration before browsing.

6.3 WIREFRAMES

Wireframes are basic layouts that represent the structure and arrangement of elements in an application before creating the final design. Wireframing helps in planning screen layouts, navigation, and user interactions.

Wireframe Screens Created

- Splash Screen
- Login and Sign Up Screens
- Home Screen
- Restaurant Screen
- Cart Screen
- Checkout Screen
- Order Confirmed Screen
- Track Order Screen
- Order Delivered Screen

Advantages

- Easy design modifications.
- Better planning of user interface.
- Identifies usability issues early.
- Improves communication between designers and developers.

6.4 DESIGN SYSTEM

A design system is a collection of reusable design elements that maintain consistency throughout the application. The ServePlus application design system includes:

Colour Palette

- Primary Colour – Deep Maroon / Red
- Accent Colour – Orange
- Background Colour – Soft Cream / Off-White
- Text Colour – Black
- Secondary Colour – Light Gray
- Success Colour – Green

Typography

- Headings and Buttons – Bold condensed sans-serif
- Body Text and Labels – Clean sans-serif, Regular and Medium
- Brand Tagline – Elegant serif (“Crave.Click.Chill”)

UI Components

- Pill buttons and login / sign up tab switch

- Underlined input fields with show-password icon
- Search Bar
- Category circles and Restaurant Cards
- Menu item rows with quantity stepper
- Checkout step indicator
- Order status timeline and delivery partner card
- Bottom Navigation Bar

Benefits

- Maintains consistency.
- Saves design time.
- Improves user experience.
- Provides reusable components.

6.5 HIGH-FIDELITY UI DESIGN

High-fidelity UI design represents the final visual appearance of the application with complete colors, images, typography, icons, and interactive elements. The high-fidelity screens of ServePlus were designed using Figma by applying modern UI principles.

Design Principles Followed

- Simplicity
- Consistency
- Accessibility
- Visual hierarchy
- Responsive design

6.6 PROTOTYPE

A prototype is an interactive model of the application that demonstrates how users navigate between different screens. The ServePlus prototype was created using Figma by connecting all designed screens and adding interactions, as shown in Figure 9.11.

Prototype Features

- Screen navigation
- Button interactions
- Order flow demonstration
- User journey simulation

Advantages

- Helps evaluate user experience.
- Identifies design improvements.
- Provides realistic application preview.
- Supports developer understanding.

7.ALGORITHM

7.1 USER LOGIN AND REGISTRATION

- User opens the app and the Splash screen is shown.

- User lands on the Login screen.
- User enters email/username and password, or selects Google, Apple, or email sign-in.
- System checks whether the required fields are completed.
- If credentials are valid, the user is taken to the Home screen.
- If the user is new, the Sign Up tab opens registration (first name, last name, email, phone, new password, confirm password).
- Registration data is validated, including password match, before account creation.
- Alternatively, the user selects “Continue as guest” and goes directly to the Home screen.

7.2 FOOD DISCOVERY AND SEARCH

- User opens the Home screen.
- User searches for a restaurant or dish, or taps a category (Biriyani, Burgers, Meals, Snacks).
- Matching restaurants or dishes are displayed.
- User selects a restaurant from Featured Restaurants.
- The menu is displayed with Starters, Main Course, and Desserts tabs.

7.3 CART AND CHECKOUT

- User adjusts the quantity of a dish using the stepper.
- The Add to Cart bar shows the running total and the user taps it.
- The Cart screen shows items, subtotal, delivery fee, and total.
- User removes items if required, or continues browsing.
- User taps Checkout and enters or confirms the delivery address (name, phone, full address).
- User saves the address and proceeds.

7.4 PAYMENT

- Display the order summary.
- Present available payment methods: UPI, Credit/Debit Card, and Wallet.
- User selects a method and taps “Proceed to payment”.
- After successful completion, show the order confirmation. The user may also cancel the checkout.

7.5 ORDER TRACKING

- After confirmation, show the estimated delivery time and what happens next.
- User taps “Track Order”.
- The live map shows the route, delivery partner, and arrival time.
- The timeline updates: Order Confirmed, Preparing, Out for Delivery, Delivered.
- User can call or chat with the delivery partner.

7.6 DELIVERY COMPLETION AND REORDER

- When delivered, the Order Delivered screen is displayed.
- User reviews the order summary and rates the experience.
- User can tap Reorder to repeat the order or return to the Home screen.

7.7 GENERAL DESIGN ALGORITHM

Requirement → Research → Problem Definition → Ideation → Information Architecture → Wireframe → Design System → High-Fidelity UI → Prototype → Testing → Feedback → Refinement → Final Handoff

8.DESIGN IMPLEMENTATION

8.1 SPLASH SCREEN

The Splash Screen introduces the brand with the ServePlus logo – a plate with a food truck, knife, and fork, flanked by a fork and knife – on a deep red background with the tagline “Crave. Click. Chill.”

8.2 LOGIN PAGE

The Login Page allows users to access the ServePlus application using email or username and password. It contains a login / sign up tab switch, a show-password icon, a Forgot Password link, Google, Apple, and email sign-in options, and a “Continue as guest” button.

8.3 SIGN UP PAGE

The Sign Up Page collects first name, last name, email, phone number, new password, and confirm password, with show-password icons and a prominent Sign Up button.

8.4 HOME PAGE

The Home Page greets the user with “What would you like to eat?”, a search bar for restaurants or dishes, circular category shortcuts, and Featured Restaurants cards showing delivery time and distance. The bottom navigation bar gives access to Home, Orders, Cart, and Profile.

8.5 RESTAURANT PAGE

The Restaurant Page shows a hero image, cuisine, location, rating, and delivery time, followed by Starters, Main Course, and Desserts tabs. Each dish row has an image, name, price, and quantity stepper. A sticky “Add to Cart” bar displays the total.

8.6 CART PAGE

The Cart Page lists selected items with a remove option and a Price Details panel (subtotal, delivery fee, total), with Checkout and Continue Browsing actions.

8.7 CHECKOUT PAGE

The Checkout Page uses a four-step indicator (Cart, Address, Payment, Confirm). It contains delivery address fields with Save Address, payment method options (UPI, Credit/Debit Card, Wallet), an order summary, and Proceed to Payment and Cancel actions.

8.8 ORDER CONFIRMED PAGE

This page shows a green tick, a thank-you message, the estimated delivery time, order details, a “What’s next?” note, and Track Order and Back to Home buttons.

8.9 TRACK ORDER PAGE

The Track Order Page provides a Live badge, a route map with arrival time, a delivery partner card with call and chat buttons, a four-stage order status timeline, and an order details panel.

8.10 ORDER DELIVERED PAGE

This page confirms delivery with a success graphic, shows the delivery partner and order summary, asks “How was your experience?” with a star rating, and offers Reorder and Back to Home actions.

9.SAMPLE OUTPUT

The following sample outputs are taken from the ServePlus UI/UX project and demonstrate the final high-fidelity interface screens developed during the internship.

Figure 9.1 – Splash Screen

Figure 9.2 – Login Page

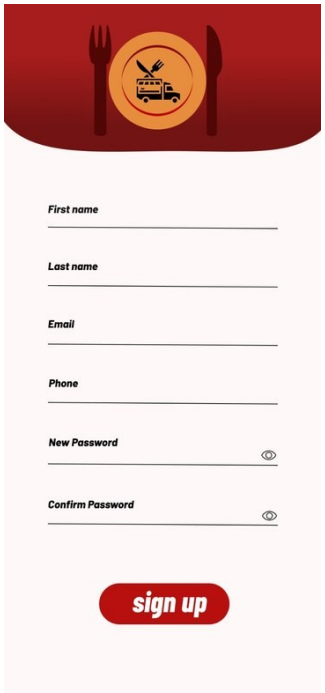

Figure 9.3 – Sign Up Page

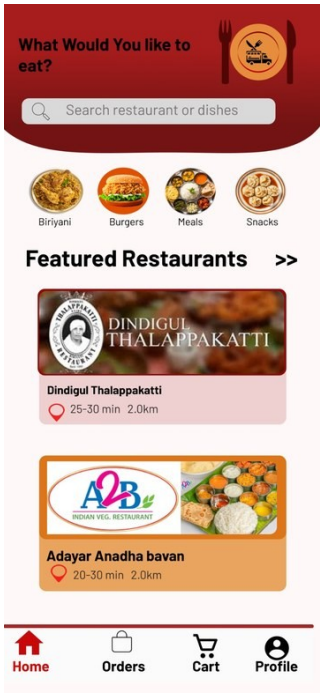

Figure 9.4 – Home Page

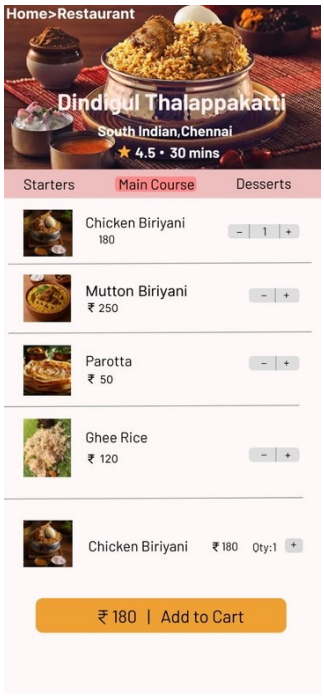

Figure 9.5 – Restaurant Menu Page

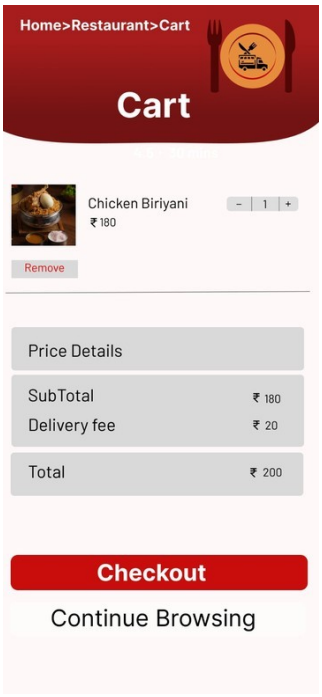

Figure 9.6 – Cart Page

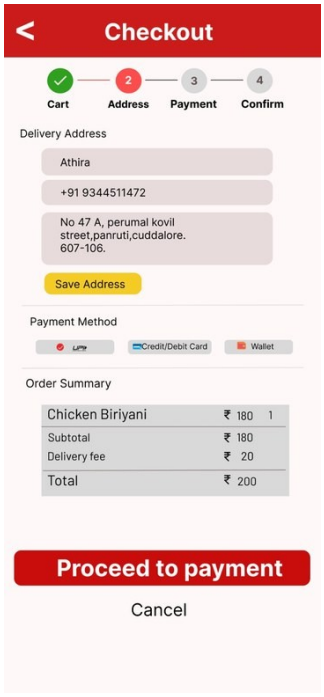

Figure 9.7 – Checkout Page

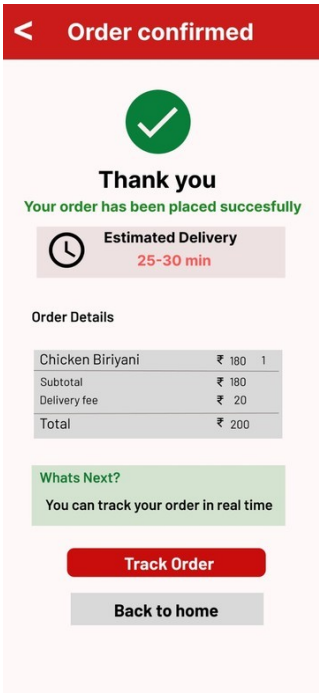

Figure 9.8 – Order Confirmed Page

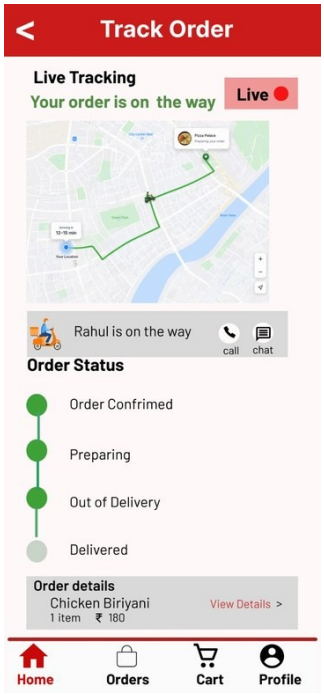

Figure 9.9 – Track Order Page

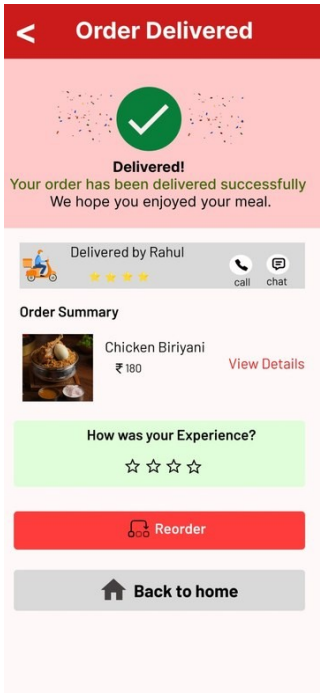

Figure 9.10 – Order Delivered Page

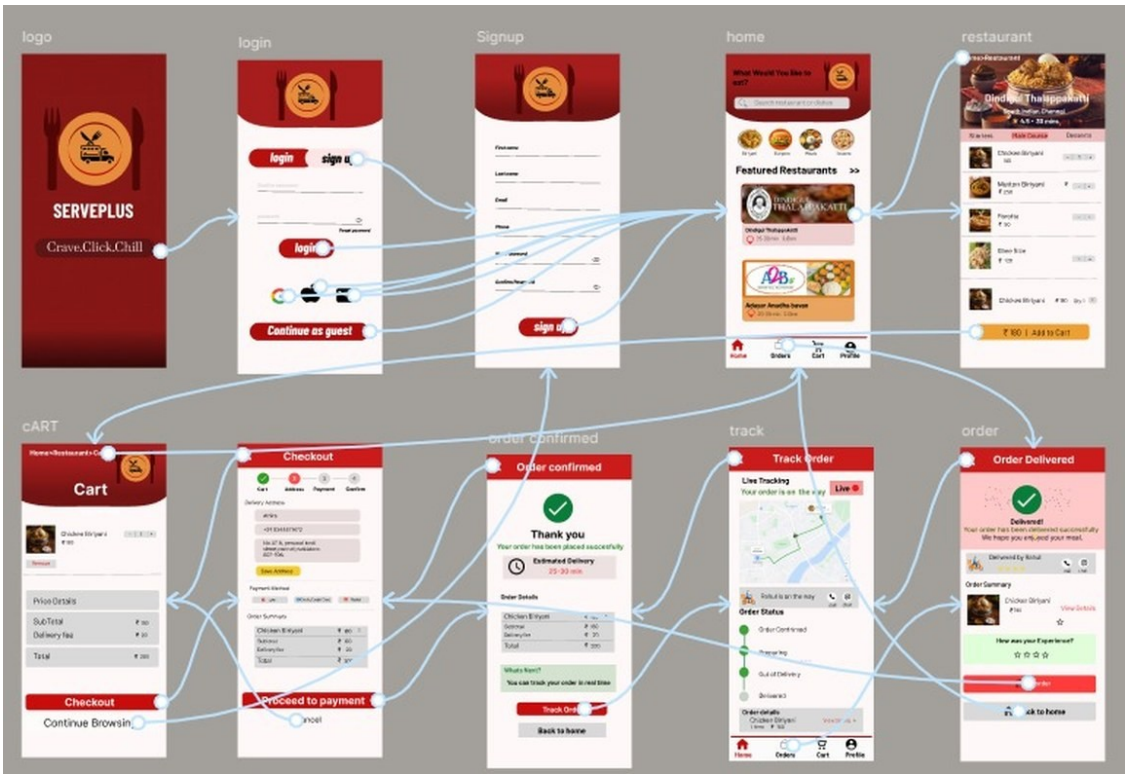

Figure 9.11 – Complete Prototype Flow in Figma

10.ANALYSIS

10.1 TESTING OVERVIEW

Testing is an important phase in the software development process used to verify the quality, usability, and performance of the application. The ServePlus interface was tested to ensure smooth navigation, consistency, and user-friendly interaction.

10.2 FUNCTIONAL TESTING

Functional testing was performed to verify whether all prototype features work according to the requirements.

Tested Features

- Login, sign up, and guest access flow
- Navigation between pages and bottom navigation
- Search and category selection
- Restaurant menu browsing
- Quantity selection and add to cart
- Checkout and address entry
- Payment method selection
- Order tracking and delivery completion flow

10.3 UI TESTING

UI testing was conducted to check the visual appearance and consistency of the application.

UI Testing Includes

- Colour consistency
- Font readability
- Button alignment and tap-target size
- Image placement
- Layout structure
- Responsive design on different mobile screen sizes

10.4 USABILITY TESTING

Usability testing was performed to evaluate the ease of use of the ServePlus application.

Testing Objectives

- Check user navigation flow.
- Identify design issues.
- Improve user interaction.
- Ensure simple and effective interface design.

10.5 TEST RESULTS

Test Area	Result
Splash, Login and Sign Up	Passed
Home Page Navigation	Passed
Category and Search	Passed
Restaurant Browsing	Passed
Cart and Checkout	Passed
Payment Interface	Passed
Order Tracking	Passed
Delivery and Reorder	Passed

Test Area	Result
Responsive Design	Passed

11.CONCLUSION

11.1 LEARNING OUTCOMES

The internship at Media Wave Technologies, Tiruchirappalli provided practical experience in UI/UX design and real-time project development.

Skills Gained

- UI/UX Design principles
- User research
- Wireframing
- Prototyping
- Design system creation
- Figma tool usage
- Usability testing
- Professional communication
- Team collaboration

11.2 CONCLUSION

The internship provided valuable industrial exposure and helped me understand the complete UI/UX design process. The ServePlus – Food Delivery Mobile Application was successfully designed by applying user-centered design principles.

Through this internship, I gained practical knowledge in creating modern, responsive, and user-friendly mobile interfaces. The experience improved my technical skills, creativity, and confidence in handling real-world software projects.

12.FUTURE WORK

The future enhancements of the ServePlus application include:

- AI-based food recommendations.
- Voice-based food search.
- Offers, coupons, and personalized deals.
- Order history, favourites, and wishlist screens.
- Saved multiple addresses.
- Help and support section with live chat.
- Dark mode and accessibility improvements.
- Frontend development and backend integration of the design.

Media Wave
TECHNOLOGIES

INTERNSHIP OFFER LETTER

03rd Jun 2026

Dear **Ms. SHOBANA V**

We are pleased to offer you an internship with **MEDIA WAVE TECHNOLOGIES.** This is an internship. Our goal is for you to learn more about **UI/UX DESIGN.**

As we discussed, your internship is expected to last Commence from **June 15, 2026, to July 15, 2026**. However, at the sole discretion of the Company, the duration of the internship may be extended or shortened with or without advance notice.

As an intern, you will not be a Company Employee. Therefore, you will not receive a salary, wages, or other compensation. In addition, you will not be eligible for any benefits that the Company offers its employees.

During your internship, you may have access to confidential, proprietary, and/or trade secret information belonging to the Company. You agree that you will keep all of this information strictly confidential and refrain from using it for your own purposes or from disclosing it to anyone outside the Company. In addition, you agree that, upon conclusion of the internship, you will immediately return to the Company all of its property, equipment, and documents.

Your responsibilities may include assisting in UI/UX design, wireframing, prototyping, user research, interface design, usability testing, and related creative activities.

Sincerely,

Chandru S
(HR Department)

Media Wave
TECHNOLOGIES

Internship Completion Letter

Strictly Confidential

July 15, 2026,

To Whom It May Concern

This letter certifies that **Ms. SHOBANA V** has interned in the role of **UI/UX Design** with **Media Wave Technologies** during the period **15 June-2026 to 15 July-2026.**

While with Media Wave Technologies, she has remained dedicated and loyal to her work and responsibilities with our company. She has done an exemplary job while in this **UI/UX Design role**. She has always maintained a professional and courteous attitude and appearance while with our company.

Her decision to end her internship with our company is solely her own decision, and we wish her all the best in her future career opportunities.

If you have any questions, please clarify from the undersigned.

Sincerely,

Chandru S
(HR Department)

Media Wave TECHNOLOGIES

ATTENDANCE CERTIFICATE

To,

The Head of the Department, Assistant professor,

University College of Engineering (BIT Campus),

Anna University,

Tiruchirappalli-620024.

Dear Sir/MAM,

This is to certify that **Ms. SHOBANA V** maintained excellent attendance during the period from **15th June 2026 to 15th July 2026** while undergoing on **UI/UX DESIGN Internship Training** conducted at **MEDIA WAVE TECHNOLOGIES.**

The listed below status of attendance:

- **Total Working Days:** 27 Days
- **Number of Days Present:** 27 Days
- **Attendance Percentage:** 100%

During this period, she has shown sincere interest, punctuality, and good conduct. We appreciate his commitment and dedication.

With best regards,

Chandru S
HR Department

Media Wave Technologies Trichy
